

## Embedding YouTube Videos In eLearning

eLearning does offer a feature geared toward embedding rich media content into text documents. As of 9/10/11 this feature is not functioning properly. This how-to shows how to embed videos from YouTube or any other video service site that provides and embed code.

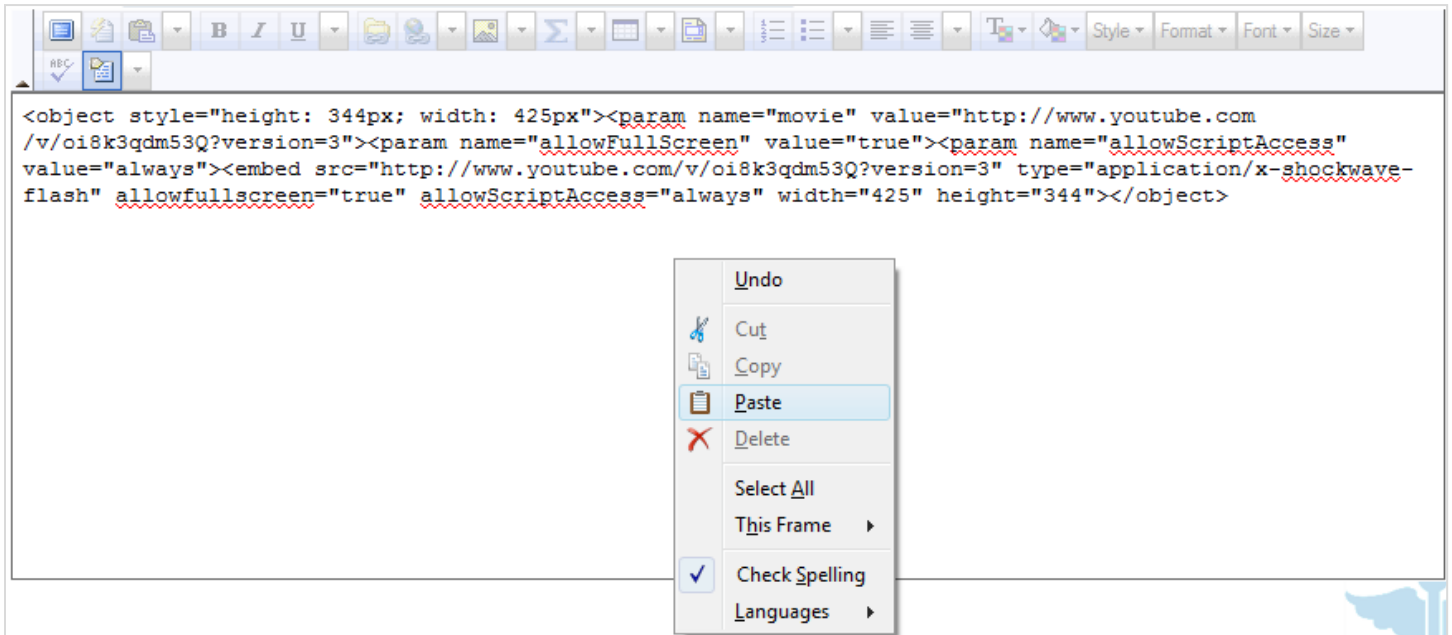

1. Log into eLearning and go wherever it is you would like to embed the video.
2. Click the Source Code image tool above the text entry area. The button is highlighted below. All of the other tools on the toolbar should grey out when this button is clicked.

3. Next, find the video you want to embed from YouTube and copy the embed code of it. This can be done by simply right clicking on the video and choosing "Copy Embed HTML".

- Now go back to eLearning and paste the copied embed html into the text area.

- Lastly you'll just need to click the Source Code button again and your video will now be embedded. When submitted/saved the video will play within the message.
