

How to Share DimDim

Once your DimDim room is created, the next step is to tell your students how to access it. A good idea is to create a link to it right inside of your course. The settings we recommend are that the link is opened in a new window with no banner showing. This will make the link open in a window separate from eLearning, making it a separate session without being disrupted by a time-out. Everything else can be named as you see fit. Please note that your students will not be able to access the room unless it is currently being hosted by the presenter, so having a specified time on certain days listed under the subtitle would be a good idea to prevent any confusion. Once you are finished setting everything up, including the links, it would be a good idea to test it to ensure that it is all working correctly. If it seems to be giving you a problem, such as saying invalid id, a good thing to do is to double check the link to ensure that it was typed in correctly.
